

Athena API Documentation

Rahal Danthanarayana

07/12/2026

Keywords

Practice - Main Organization setting in Athena API

Provider - a Regular Provider

Step One - auth	1
Step Two - Create a Patient Profile	2
Elena Garcia	2
James Okafor	4
Sofia Reyes	5
Step 3 - Create Appointment Slots	6
Create open slot	7
Notes	9
Step 4 - Book the appointment Slot	9
Step 5 - Show Booked appointment Slots	10

Step One - auth

Obtain Authorized token by sending Practice ID, Client ID and the secret ID using following HTTPS POST request to the following API path by using the Auth2 method.

<https://api.preview.platform.athenahealth.com//oauth2/v1/token>

With scope as "athena/service/Athenanet.MDP.*"

Step Two - Create a Patient Profile

I have created three patient profiles using following CURL requests by including the **BEARER** token in the request header.

=====

Elena Garcia

```

Step 3 - Create Appointment Slots

For the patients to book an appointment the Athena Sandbox expects each practice to have open slots for a given date and time. I have used following configurations to create open slots for appointments.

- Practice : 195900
- Selected providerId: 71
- reasonid=1285
- appointmenttypeid=1

Create open slot

POST /v1/{practiceid}/appointments/open

Create a new appointment slot

Provides the ability to add new open appointment slots

Parameters

Name	Description
practiceid integer (path)	practiceid 195900
Content-Type string (header)	Content type of the payload application/json

Request body

application/x-www-form-urlencoded

reasonid integer	The appointment reason (/patientappointmentreasons) to be created. Either this or a raw appointment type ID must be provided. reasonid ☐ Send empty value
providerid integer	The athenaNet provider ID. providerid
departmentid	The athenaNet department ID.

Appointments

Request body

application/x-www-form-urlencoded

reasonid integer	The appointment reason (/patientappointmentreasons) to be created. Either this or a raw appointment type ID must be provided. 1285 ☐ Send empty value
providerid integer	The athenaNet provider ID. 71
departmentid integer	The athenaNet department ID. 1
appointmentdate string	The appointment date for the new open appointment slot (mm/dd/yyyy). 07/28/2026
appointmenttime array	The time (hh24.mi) for the new appointment slot. Multiple times (either as a comma delimited list or multiple POSTed values) are allowed. 24 hour time. 08:15 09:00 11:00 12:00 Add string item
appointmenttypeid integer	The appointment type ID to be created. Either this or a reason must be provided. 1 ☐ Send empty value

Response

The screenshot displays a REST client interface with the following details:

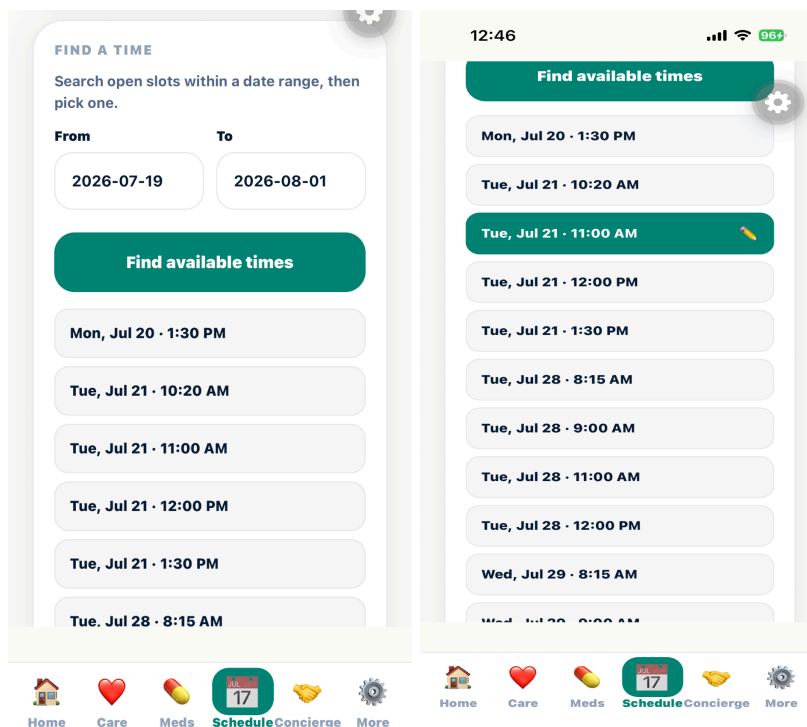

- Buttons:** "Execute" and "Clear Responses".
- Section: Responses**
- Curl:**

```
curl -X 'POST' \
  'https://api.preview.platform.athenahealth.com/v1/195900/appointments/open' \
  -H 'accept: application/json' \
  -H 'Authorization: Bearer eyJraWQ1OjIwOVVlXUJhTHNSUlpkQm90RmZzLUNVcWFLU3NCX0NDR0xpek1xcEM0IiwiaW9mIjo1UHYNTYifQ.eyJ2ZXIiOiJEsImp0aSI6IklFULlUtenZSaUJ20GhKX3BKMUsecTVDYy1iMm5HTT10' \
  -H 'Content-Type: application/x-www-form-urlencoded' \
  -d 'reasonid=12856providerid=715departmentid=16appointmentdate=07%2F20%2F2026appointmenttime=08%3A15,09%3A00,11%3A00,12%3A00appointmenttypeid=1'
```
- Request URL:** `https://api.preview.platform.athenahealth.com/v1/195900/appointments/open`
- Server response:**
 - Code:** 200
 - Details:**
- Response body:**

```
{
  "appointmentids": {
    "1465725": "08:15",
    "1465726": "09:00",
    "1465727": "11:00",
    "1465728": "12:00"
  }
}
```
- Response headers:**

```
cache-control: no-cache, no-store
content-type: application/json; charset=UTF-8
expires: Sun, 06 Jan 2075 16:00:00 GMT
pragma: No-cache
```

In the App we can see the available slots like this after a date range. After Athena replies with a list of open slots the user can select the appropriate slot.

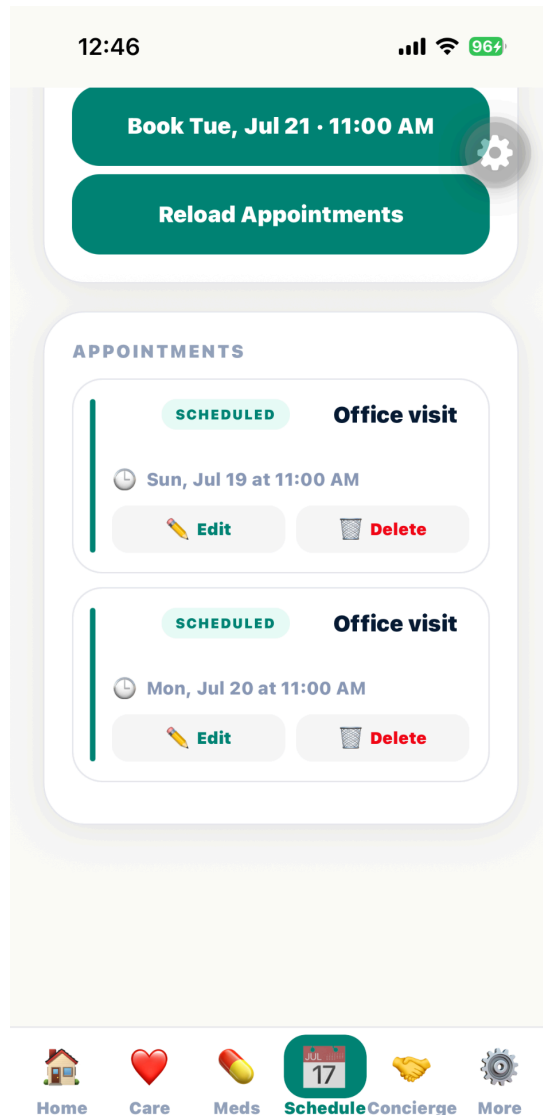

After the slot selection the user can proceed by pressing on the Book button.

Notes

- We can't add backdated appointment slots
- I have used ProviderId, Reason Type and Appointment Reasons based on preconfigured values in the given Athena SandBox and I used several other methods to retrieve them to have it analyzed. And since the data is long I only added a few datapoints to give a visualization.

Step 4 - Book the appointment Slot

Now using the same Provider, department and additionally the patient Id we can book a certain slot using Athena API.

Step 5 - Show Booked appointment Slots

After the booking is created the app reloads the booked appointments data for the Patient from Athena and updates the UI of the app.
